Educore
SCHOOL MANAGEMENT SYSTEM

SCHOOL MANAGEMENT SYSTEM FOR KENYA

School management software, built for Kenyan schools.

Admissions, academics, finance, attendance and parent communication — in one platform, with M-Pesa reconciliation and CBC grading built in from day one.

EduCore dashboard, shown with illustrative sample data.

THE SCHOOL MANAGEMENT CHALLENGE

Most schools run on systems that were never built to talk to each other.

A fee spreadsheet here, a WhatsApp group there, a paper attendance register in every classroom, an admissions notebook at the front desk. Nothing is wrong with any one of them — the problem is that none of them share the same picture of the school.

- **Fragmented student records** spread across registers, spreadsheets and paper files, with no single source of truth.
- **Fee tracking done by hand** — matching M-Pesa messages and bank slips against a ledger, one payment at a time.
- **Attendance on paper**, recorded in a register that has to be re-entered before anyone can act on it.
- **Admissions in a notebook**, with inquiries and applications tracked by memory rather than a pipeline.
- **Reports compiled manually** at end of term, pulled together from whichever system happens to have the numbers.

One platform, instead of five

EduCore brings admissions, academics, finance, attendance and communication into a single system that every role in the school actually uses — from the principal's office to the classroom to the bursar's desk.

Built for every role in the school

School owners and principals get one view of the whole operation. Administrators run admissions and reporting without parallel spreadsheets. Teachers handle attendance, grading and report comments in one place. Finance teams reconcile M-Pesa payments without re-keying anything.

CORE SCHOOL MANAGEMENT

Everything a school office runs on, in one place.

A — Admissions
From first inquiry to enrollment, tracked in one pipeline instead of scattered forms and phone calls.

S — Student Records
One record per learner — academic, disciplinary, medical and family — not five spreadsheets.

F — Finance & Fees
Invoicing, payments and reconciliation, with M-Pesa STK push built in for how Kenyan schools get paid.

✓ — Attendance
Daily class registers, with support for biometric check-in that feeds straight into attendance records.

$ — Staff & Payroll
Payroll runs, leave and staff records — including PAYE, NSSF, SHIF and the Housing Levy.

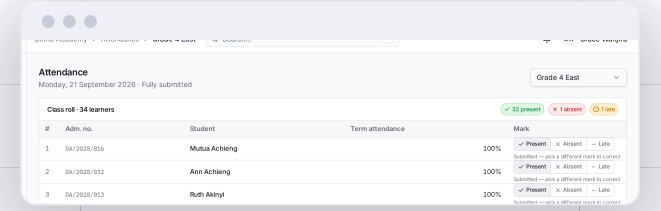

B — Boarding
Dormitories, bed allocation, roll call and incident records for schools that board learners.

@ — Communication
Reach parents over WhatsApp, SMS and email from the same place you manage everything else.

P — Parent Portal
A dedicated login for parents to see fees, grades and attendance — no more spreadsheets emailed home.

L — Library & Inventory
Book loans, stock levels and reorder alerts, tracked alongside school operations.

R — Reports & Exports
Export to Excel, CSV or PDF whenever you need to, without manual compiling.

Class attendance register, shown with illustrative sample data.

Educore
SCHOOL MANAGEMENT SYSTEM

BEYOND THE CORE

The whole school, not just the front office.

The modules on the first page are where most schools begin. EduCore goes further — into the dormitory, the sick bay, the bus route, the library and the store room — so nothing your school runs has to live outside the system.

HOW THIS BROCHURE CONTINUES

01 **Student life & operations**
You are here

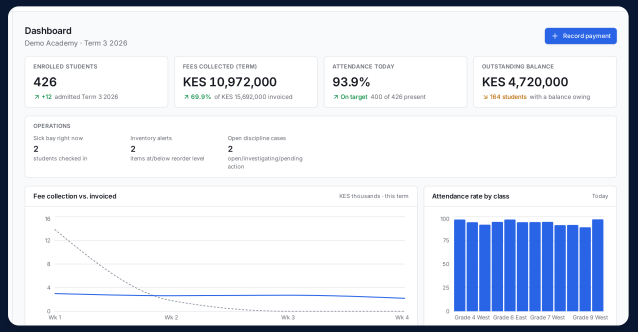

02 **Finance, people & administration**
Fees, payroll, reports, plans

03 **Parents, communication & AI**
Portals, messaging, drafting tools

04 **Academics & scheme of work**
Planning, timetable, assessment

One learner, one record

Admissions, attendance, health, boarding, transport, fees and academics all attach to the same student — so the learner looks the same wherever you open them.

EduCore dashboard, shown with illustrative sample data.

STUDENT LIFE

From the first application to the dormitory roll call.

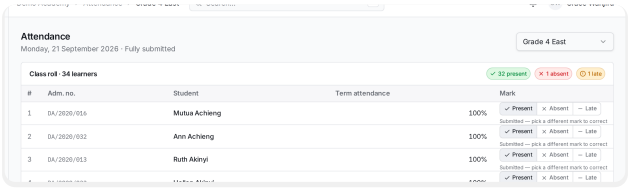

A — Admissions, in depth
Each school gets its own online application form, and walk-in applicants can be captured at the front desk. The admission form itself is configurable, and every applicant carries a tracked status through to enrollment.

S — Student records & data migration
A central learner directory linking academic, health, finance and family records. Moving from another system? A data import tool brings existing records in, and data export takes them out again.

✓ — Attendance & biometrics
Stream-based class registers, or biometric check-in from paired devices, with parents notified automatically. Staff attendance is tracked too, and biometric events are logged for review.

B — Boarding
Dormitory, room and bed structure and allocation; roll call; boarding transfers; boarding incidents; a boarding dashboard and dedicated reports.

D — Discipline & welfare
Incidents, cases and welfare concerns tracked together — plus a separate safeguarding record that only explicitly permitted staff can open.

Class attendance register, shown with illustrative sample data.

CARE & RESOURCES

Health, transport and everything the school owns.

H — Health & clinic
Medical records, sick bay visits, medication logs, referrals and emergencies, with clinic stock and health reports.

T — Transport
Routes, vehicles and stops, with each learner's pickup point and vehicle assignment tracked against them.

L — Library
Catalogue and loans, shelving, reservations and fines — run the way a school library actually operates.

I — Inventory & procurement
Stock, assets and suppliers, linked to a requisition-to-payment procurement chain and supplier invoices, instead of spreadsheets that never reconcile.

C — Multi-campus groups
Cross-campus overview, shared group branding and group-level API access for school groups — while each campus keeps its own isolated data.

K — Biometric devices & kiosk
Pair a device as a check-in kiosk, manage devices centrally, and review every check-in event in a log.

Safe by design

Every record above sits behind role-based permissions and per-school data isolation, with sensitive actions written to an audit log.

FINANCE & FEES, IN DEPTH

From fee structure to reconciled receipt.

Finance is built around how Kenyan schools are actually paid, with M-Pesa at the centre.

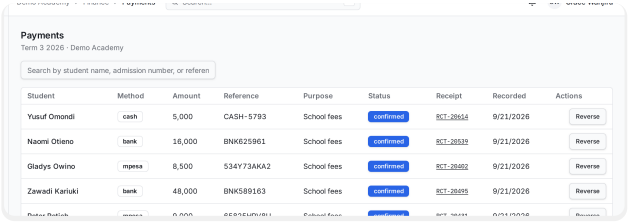

F **Fee structures & invoicing**
Define fee structures once, then invoice learners from them.

$ **Student accounts**
A live balance per learner, with discounts and waivers applied and recorded against the account.

M **Payments & M-Pesa**
Cash, bank and M-Pesa payments logged with references. STK push prompts parents to pay, M-Pesa payments are checked server-side and reconcile against invoices automatically, and parents can view receipts in their portal.

! **Receivables & fee alerts**
See who owes what, and send fee reminders from templates — AI can polish the tone, but nothing goes out unreviewed.

R **Finance dashboard & reports**
Fee collection against amount invoiced and outstanding balances at a glance, with finance reports you can export.

Fee payments and M-Pesa references, shown with illustrative sample data.

PEOPLE & PAYROLL

Staff, salaries and statutory deductions.

Payroll runs & salary structures
Set up salary structures and run payroll each month, with PAYE, NSSF, SHIF and the Housing Levy computed against current Kenyan statutory rates.

Staff records & leave
One staff directory for records and roles, with configurable leave types and leave records.

Staff attendance
Staff attendance is recorded in the same system as learner attendance.

Roles & permission requests
Accounts hold only the permissions their role needs. Staff can request additional access, and the school reviews it.

Teacher performance
A dedicated appraisal record kept alongside the academic data it is based on — visible only to the reviewer tier and the teacher being reviewed.

Audit log
Sensitive actions are recorded so the school owner can review who did what, and when.

Every school's data kept separate
Row-level security isolates each school's records at the database level. A teacher can only ever reach their own school's data.

Billing & subscription
See your school's plan and subscription status from inside Settings.

REPORTS, DATA & PLANS

Export it, import it, and choose the plan that fits.

R **Reports & analytics**
Management reports drawn from live data and exportable to Excel, CSV or PDF — no month-end compiling.

↕ **Data import & export**
Bring a school's data in from another system, and export it out whenever you need it.

B **Branding, notifications & API keys**
Put your school's own branding on the platform, tune notification settings, and issue API keys for integrations.

PLANS THAT GROW WITH THE SCHOOL

Starter · up to 200 learners
Core student and staff records, academics and finance.

Growth · up to 800 learners
Adds payroll, library, transport, boarding, inventory and communication.

Enterprise · no learner cap
The full module set, plus the AI features.

Billed termly, per learner. Every school starts with a 30-day free trial, no card required — ask us for current rates.

COMMUNICATION

Every conversation with a parent, in one place.

@ **WhatsApp, SMS & email**
Send from one place, with reusable templates and full message history.

A **Announcements**
School-wide announcements published from the same place you manage everything else.

C **EduCore Connect**
Structured, per-student messages from a class teacher to that learner's parents — a request, an academic note, an attendance flag. Parents read, acknowledge and reply on the thread; only the teacher who raised it can mark it resolved.

P **Parent-teacher meetings**
Publish available slots; parents book them directly from the portal.

N **Termly newsletters**
A newsletter for each term, reviewed and edited by staff before it goes out to guardians.

W **WhatsApp parent bot**
Answers common questions such as a child's fee balance or attendance over WhatsApp. Anything it doesn't recognise is handed straight to a staff member.

Staff stay in the loop
Newsletters and AI-polished messages are always reviewed and approved by staff before they reach a parent.

PORTALS & HOMEWORK

Parents and learners see what concerns them — nothing more.

P **Parent portal**
A separate parent login linked to each guardian's children: fees and receipts, grades and attendance, and booking for parent-teacher meetings.

S **Student portal**
A scoped learner view: timetable, fee balance, attendance rate, latest result and homework.

H **Homework**
Teachers set assignments by class and subject with due dates; submissions are tracked and graded in the platform, so homework isn't lost between a notebook and a WhatsApp group.

R **Report cards & results**
Report cards built from marks, with a remark bank for reusable comments, structured rubrics, merit lists and a class performance dashboard.

O **Online applications**
Prospective parents apply through your school's own online application form — no paper forms to re-key.

Works when the connection doesn't
Core workflows such as attendance and marks entry queue on the device and sync automatically once the connection returns.

AI, WITH A PERSON IN CHARGE

AI that drafts. People decide.

Every AI feature works from your school's own data. Generated writing is a draft for staff to review — never sent to a parent unreviewed.

- **Scheme of work drafting**
  Full termly schemes, grounded in curriculum content — see the next page.
- **Report-card comments**
  A first draft for each learner from their marks this term, for the teacher to edit.
- **Newsletter & fee-alert polish**
  Warmer wording that keeps every placeholder and figure exactly as written.
- **Ask EduCore AI**
  Ask a plain-language question and get an answer from your school's real, permission-scoped data. School Owner and Principal accounts.
- **Timetable auto-generation**
  A scheduling algorithm, not a language model, that avoids stream and teacher double-booking.
- **At-risk learner ranking**
  A transparent, hand-weighted score across attendance, exam trend, payment lateness and discipline.
- **WhatsApp parent bot**
  Keyword-matched answers on fee balance and attendance; anything unrecognised goes to a person.

AI features are part of the Enterprise plan.

ACADEMICS · SCHEME OF WORK

Auto-generated schemes of work, ready to refine.

Termly planning is one of the heaviest jobs a teacher has. EduCore drafts a complete scheme of work — week by week, lesson by lesson — grounded in curriculum content, for the teacher to review and make their own.

1. **Choose the class**
   Pick the year, term, class, subject, number of teaching weeks and lessons per week. Your teaching assignments are pre-filled.

2. **Grounded in the curriculum**
   The draft draws on KICD curriculum content and the curriculum your school has recorded. If a subject has none, EduCore stops and says so, rather than inventing one.

3. **Quality-checked draft**
   Missing weeks, repeated topics, and lessons without outcomes, activities or assessment are flagged before you save.

4. **Edit, submit, approve**
   Refine any lesson, then submit the scheme for review and approval.

Prefer to write it yourself?
Create a scheme manually — same structure, same tracking, same approval workflow. AI drafting is controlled by a permission the school grants.

Fits how the class actually meets
Set anywhere from 1 to 20 lessons per week, so the scheme matches the real timetable rather than a template.

INSIDE EVERY SCHEME

Every lesson, fully planned.

Topic · Sub-topic · Learning outcomes · Content · Learning activities · Teaching methods · Resources · Assessment methods · References · Remarks · Lesson date

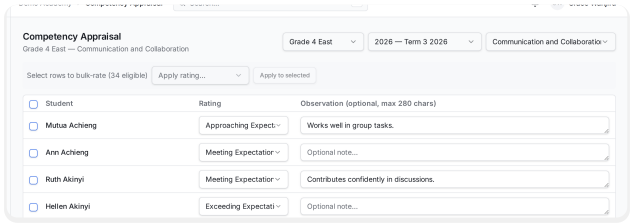

✓ **Track it as you teach**
Tick lessons off as they are taught; each scheme shows lessons completed against planned, with a percentage.

✦ **Refine one lesson with AI**
Improve a single lesson without touching the rest of the scheme.

↔ **Duplicate & move lessons**
Copy a lesson, or move it to another week or slot, with its content and progress intact.

§ **Review workflow**
Draft, In progress, Submitted, Under review, Approved — with reviewer comments on the scheme.

F **Find & print**
Filter every scheme by year, term, class, stream, subject, teacher and status, and print any scheme for the staff file.

CBC competency appraisal, shown with illustrative sample data.

THE REST OF ACADEMICS

Planning, teaching and assessment, connected.

Y **Years, terms, classes & subjects**
The academic calendar, classes and streams, subjects and teacher allocation in one structure.

T **Timetable auto-generation**
Fills the weekly timetable from each subject's periods per week, with no stream or teacher double-booking.

K **Curriculum & KICD content**
A KICD content library plus curriculum content your school records — the source for scheme drafting.

X **Exams & grading**
Marks entry on numeric or CBC scales, grading scales, rubrics, growth tracking and performance dashboard.

P **Pathway guidance**
An advisory pathway-fit signal from recorded subject performance — never a requirement.

C **CBC competency appraisal**
Four-level ratings and observations per learner across the core competencies, values and PCI areas — detailed on the final page.

↑ **Year rollover**
Bulk-promote learners to the next year, mark repeaters, and graduate final-year classes.

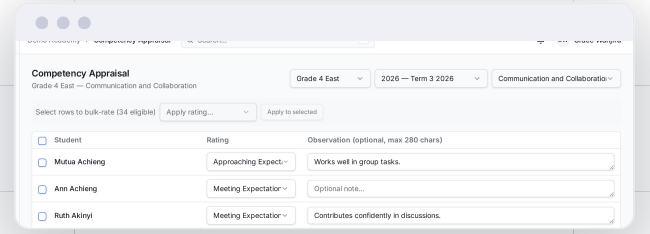

N **NEMIS & KNEC files**
Ministry-format upload files prepared from your records for you to submit yourself.

EduCore is not integrated with NEMIS or KNEC and does not submit data to either system on a school's behalf.

ACADEMICS & CBC

Built for the way Kenyan schools actually assess learners.

EduCore supports numeric and CBC competency-based grading side by side — set per school, per grade, or per class — so a school doesn't have to choose one system for the whole institution.

CBC competency appraisal, shown with illustrative sample data.

7 core competencies · **8 KICD values** · **PCI areas** · **4-level rating scale**

NEMIS & KNEC CBA — honestly described

Kenya's NEMIS and KNEC CBA portals don't currently offer a public API for schools to submit to directly. EduCore prepares the Ministry-format files from your own records — you upload them yourself, and confirm the upload back in EduCore, so nothing is submitted without you seeing it first.

EduCore is not integrated with NEMIS or KNEC and does not submit data to either system on a school's behalf. It generates upload-ready files from a school's own records for the school to review and submit itself.

WHY EDUCORE

Practical reasons Kenyan schools run on EduCore.

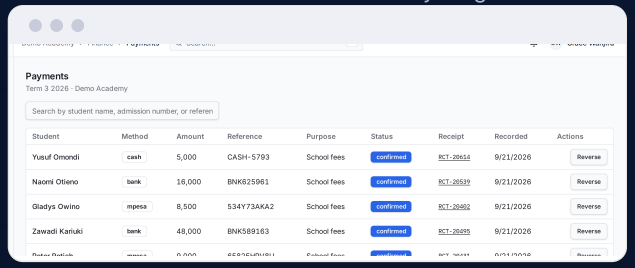

✓ **M-Pesa built in, not bolted on**
Fee payments reconcile automatically against invoices, instead of being matched by hand against a paper ledger.

✓ **Every school's data kept separate**
Each school's records are isolated at the database level by row-level security — never visible to another school.

✓ **Built for patchy connectivity**
Core workflows like attendance and marks entry queue on the device and sync automatically once the connection returns.

✓ **Role-based access, with an audit log**
Staff accounts hold only the permissions their role needs, and sensitive actions are recorded for the school to review.

✓ **A first draft, not a blank page**
Teachers get an AI-assisted first draft of report-card comments grounded in each learner's own record — theirs to review and edit before anything is sent.

Fee payments and M-Pesa references, shown with illustrative sample data.

Educore
SCHOOL MANAGEMENT SYSTEM

One platform for how your school actually runs.

Admissions, academics, finance, attendance and communication — brought into one connected system, built for Kenyan schools.
